# Telemetry Overview

## Components

### Functionality

**OBC POD**

**OBC Battery**

**OBC Back bone**

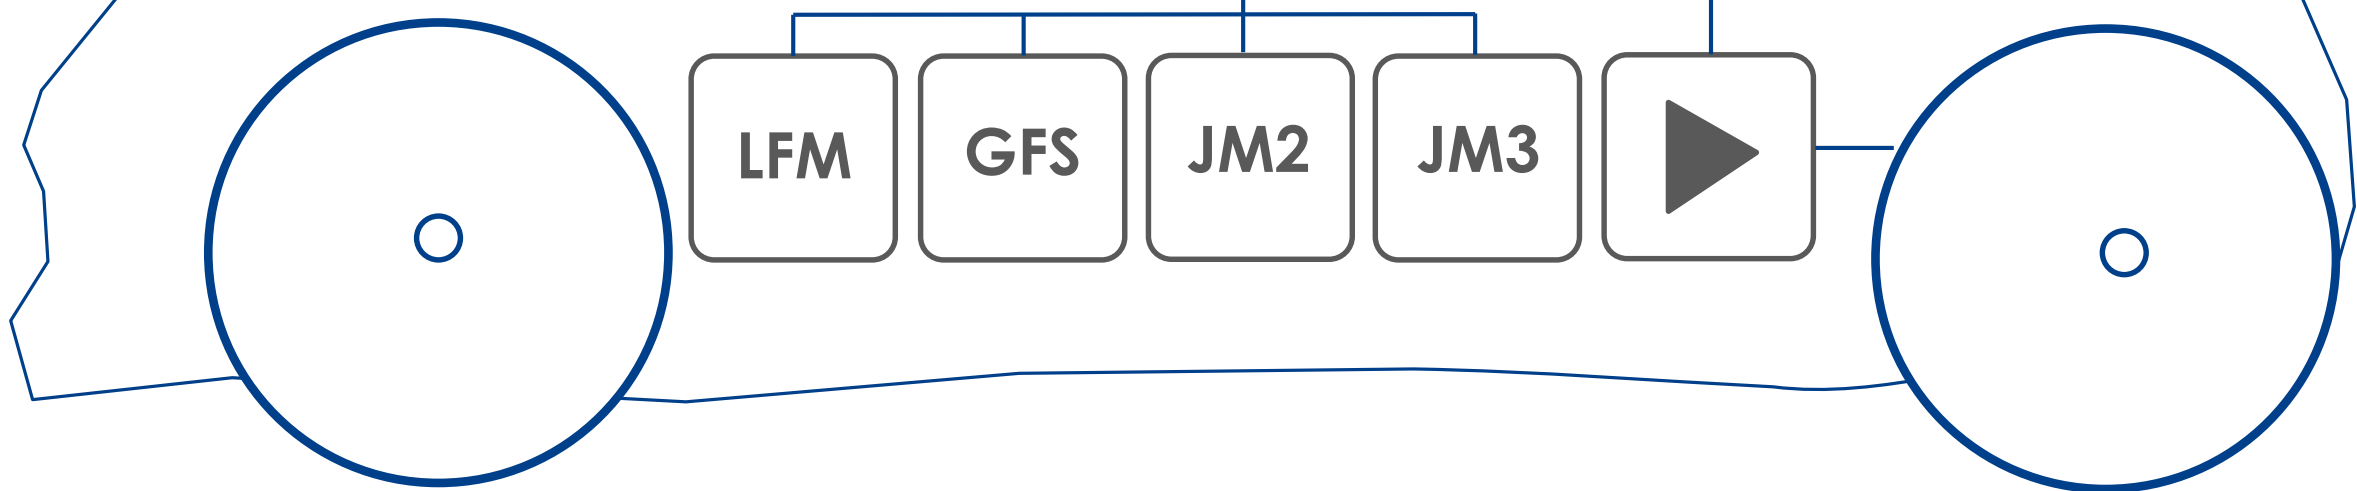

**LFM**

**GFS**

**JM2**

**JM3**

# Onboard-Computer (OBC) - **POD**

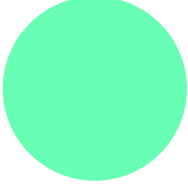

# Onboard-Computer (OBC) - **BACKBONE**

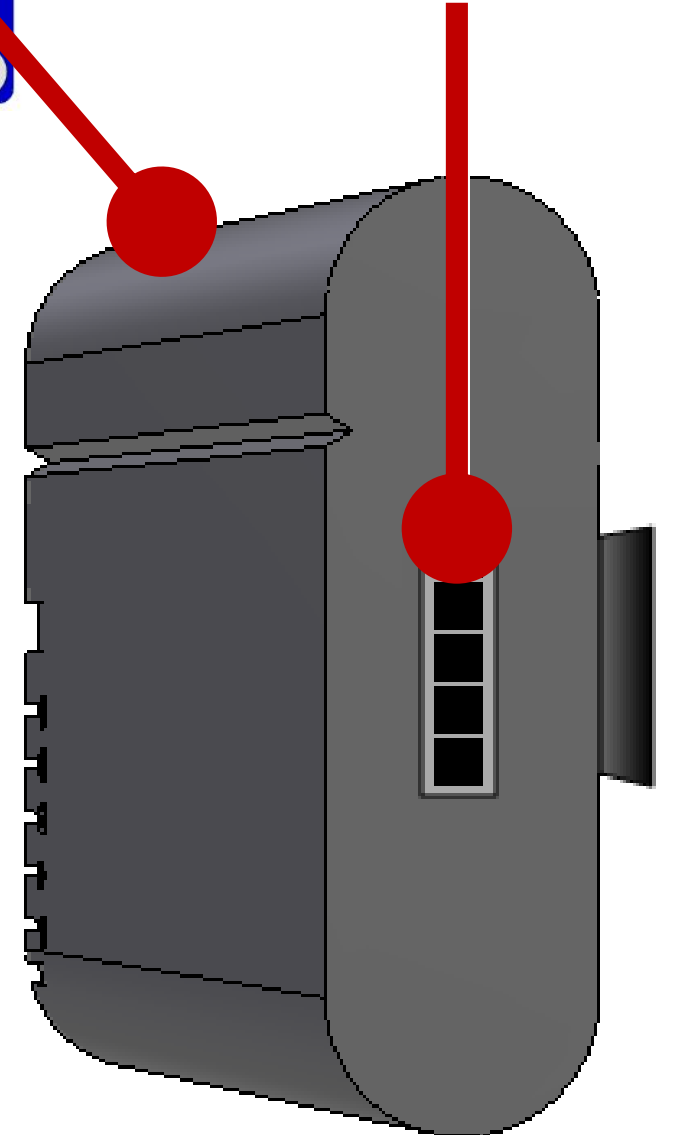

# OBC-Battery

Battery Level Indicator

- 12V **Lithium-Ion**-Battery
- Holder + **Charger** 
- Visible Level **Indicator**
- If down to **0%** → Tech Team

**YOU MUST** charge the battery before attempts!

# 4 Types of Energy sensors

**Liquid flowmeter**  
(ICE)

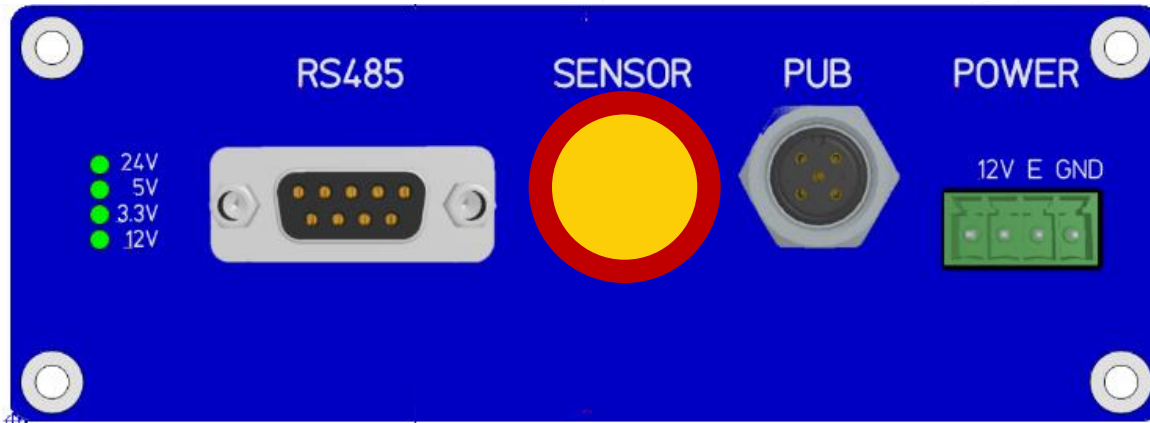

**Joulemeter 2**  
(All vehicles)

**Joulemeter 3**  
(All vehicles)

**Gasflow**  
-meter  
(Hydrogen)

# Liquid flowmeter (LFM)

**IN**

**OUT**

**Fittings**

# Joulemeter (JM2)

Ensure to route the  
USB-Cable **far away** from  
**POWER ELECTRONICS**

On/Off

# Joulemeter (JM3)

# Hydrogen flowmeter

- Hydrogen gas flow in normal litres
- NO leaks
- NO Teflon tape
- DSUB9: Must be tight

SUB D-9 cable

# Shutdown relays

- Shut **propulsion** down
- **Two** Relays, use either
- **NO** and **NC**
- **MUST be wired!**
- Do a **SELF TEST**

Relay deactivated  
→ Motor ENABLED

Relay activated  
→ Motor DISABLED

---

# Mounting & Verification

# 2.0

# Quick **Self-Diagnostic** before inspection

Once all components installed:

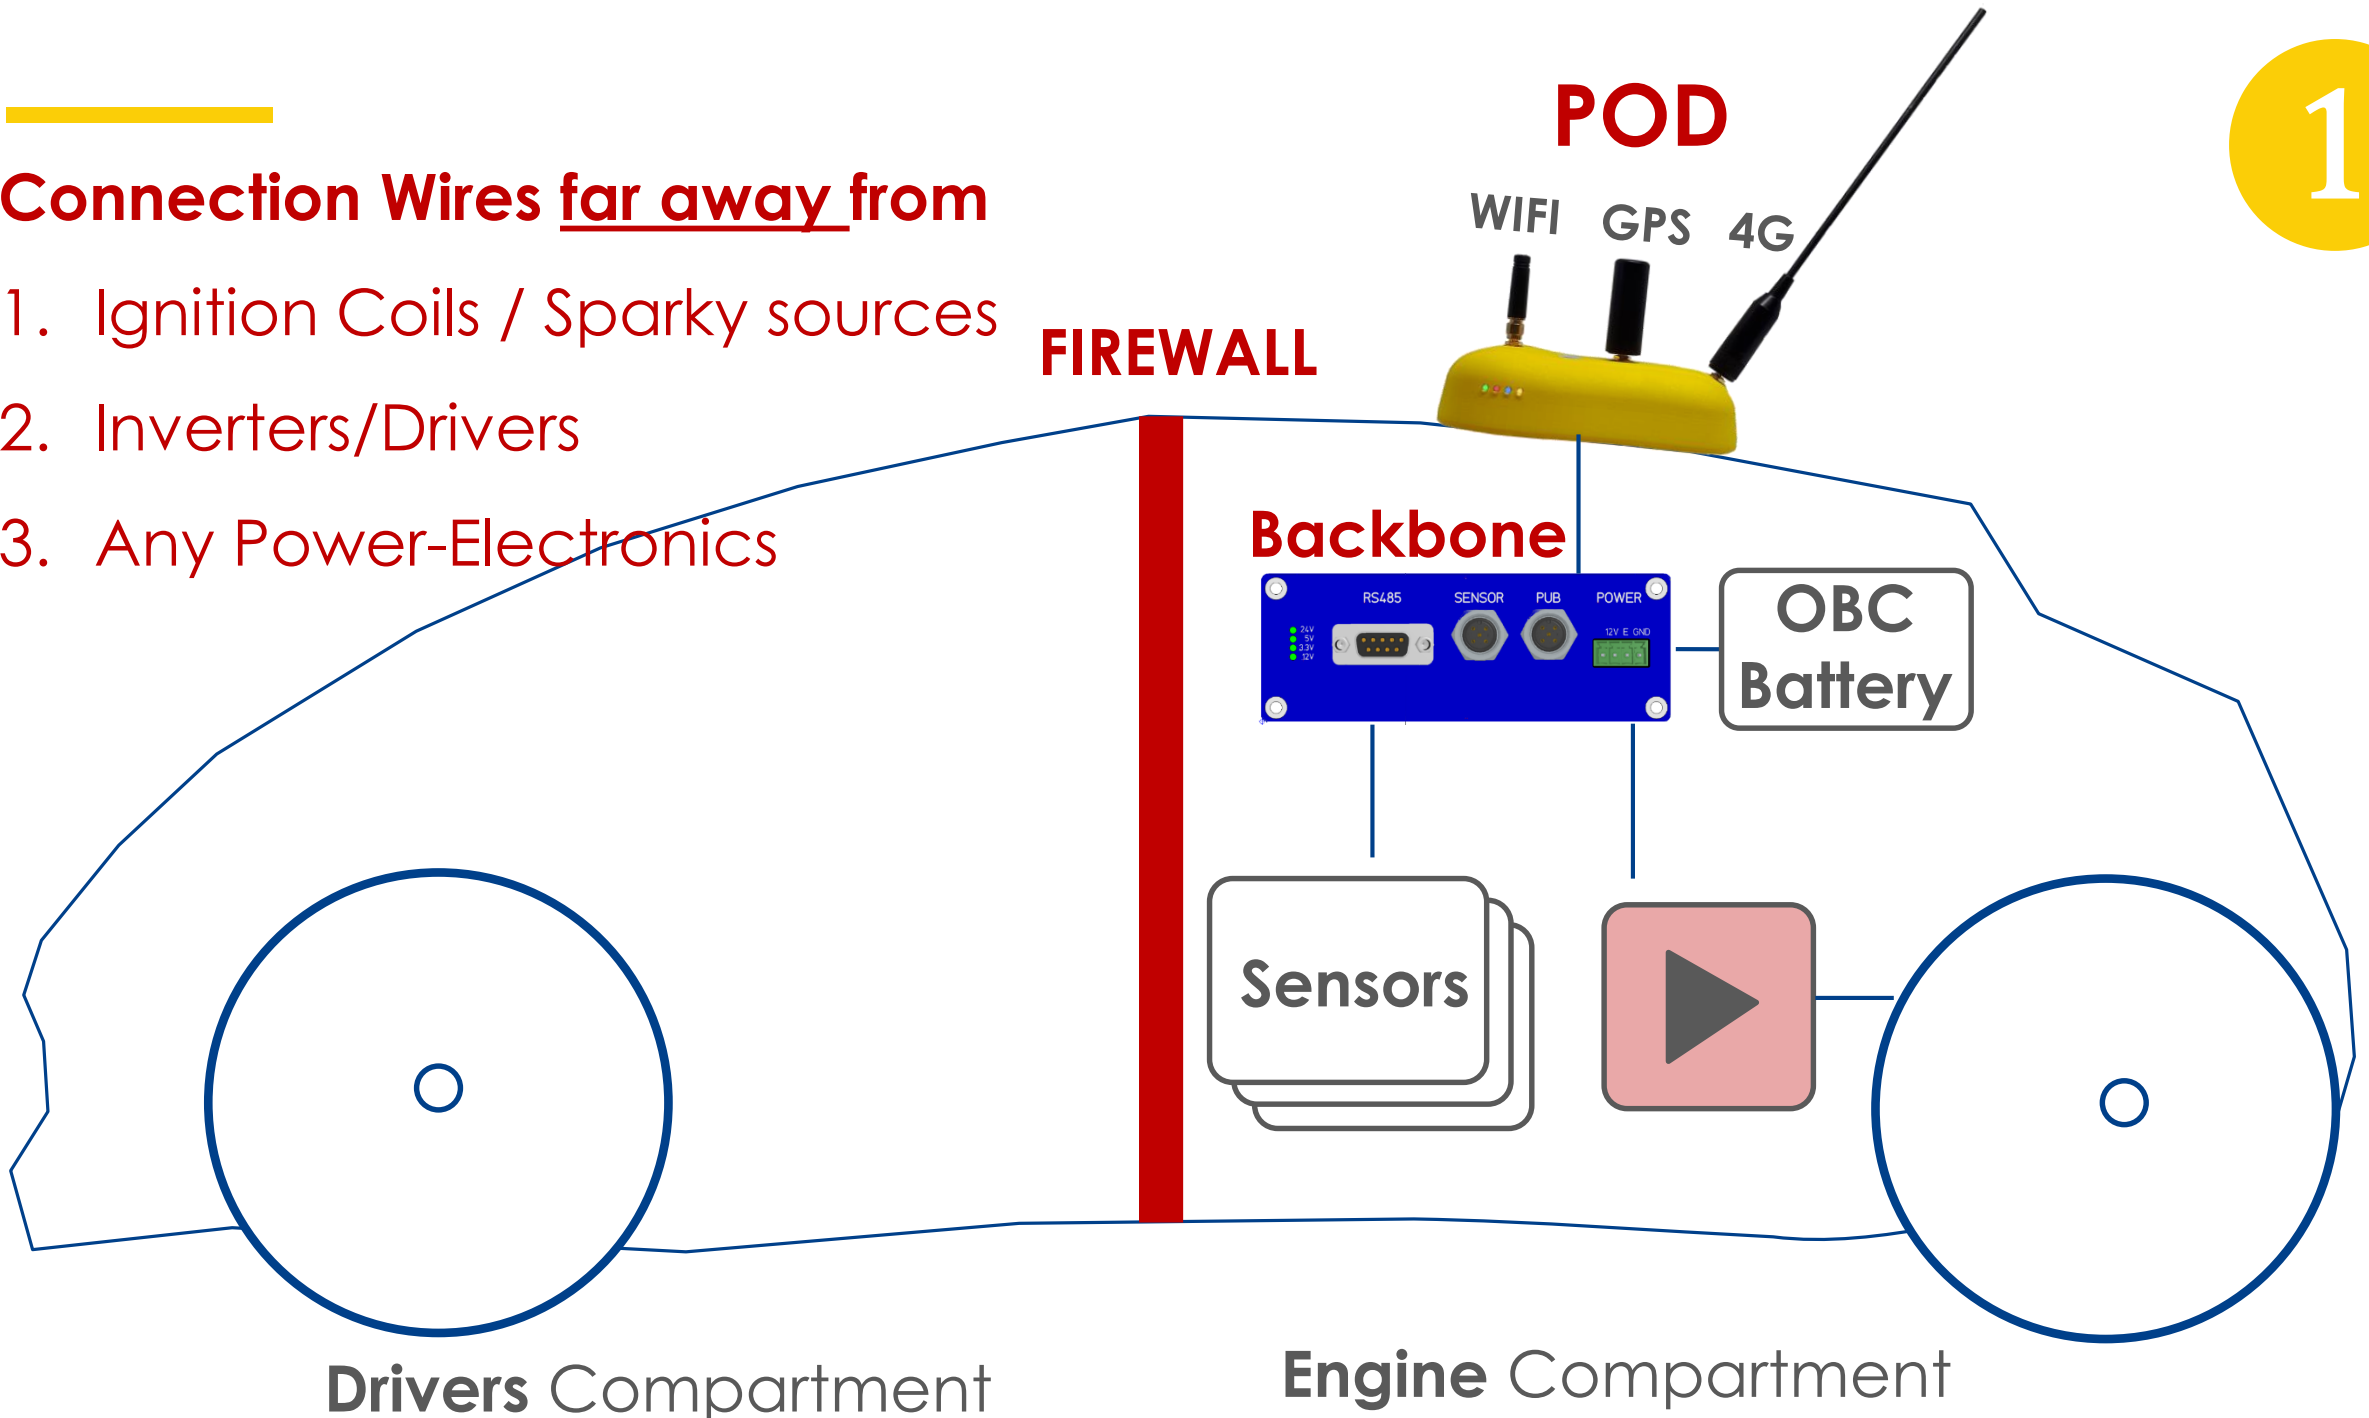

- Check **OBC battery**
- Turn **on** OBC
- Wait max **60** seconds

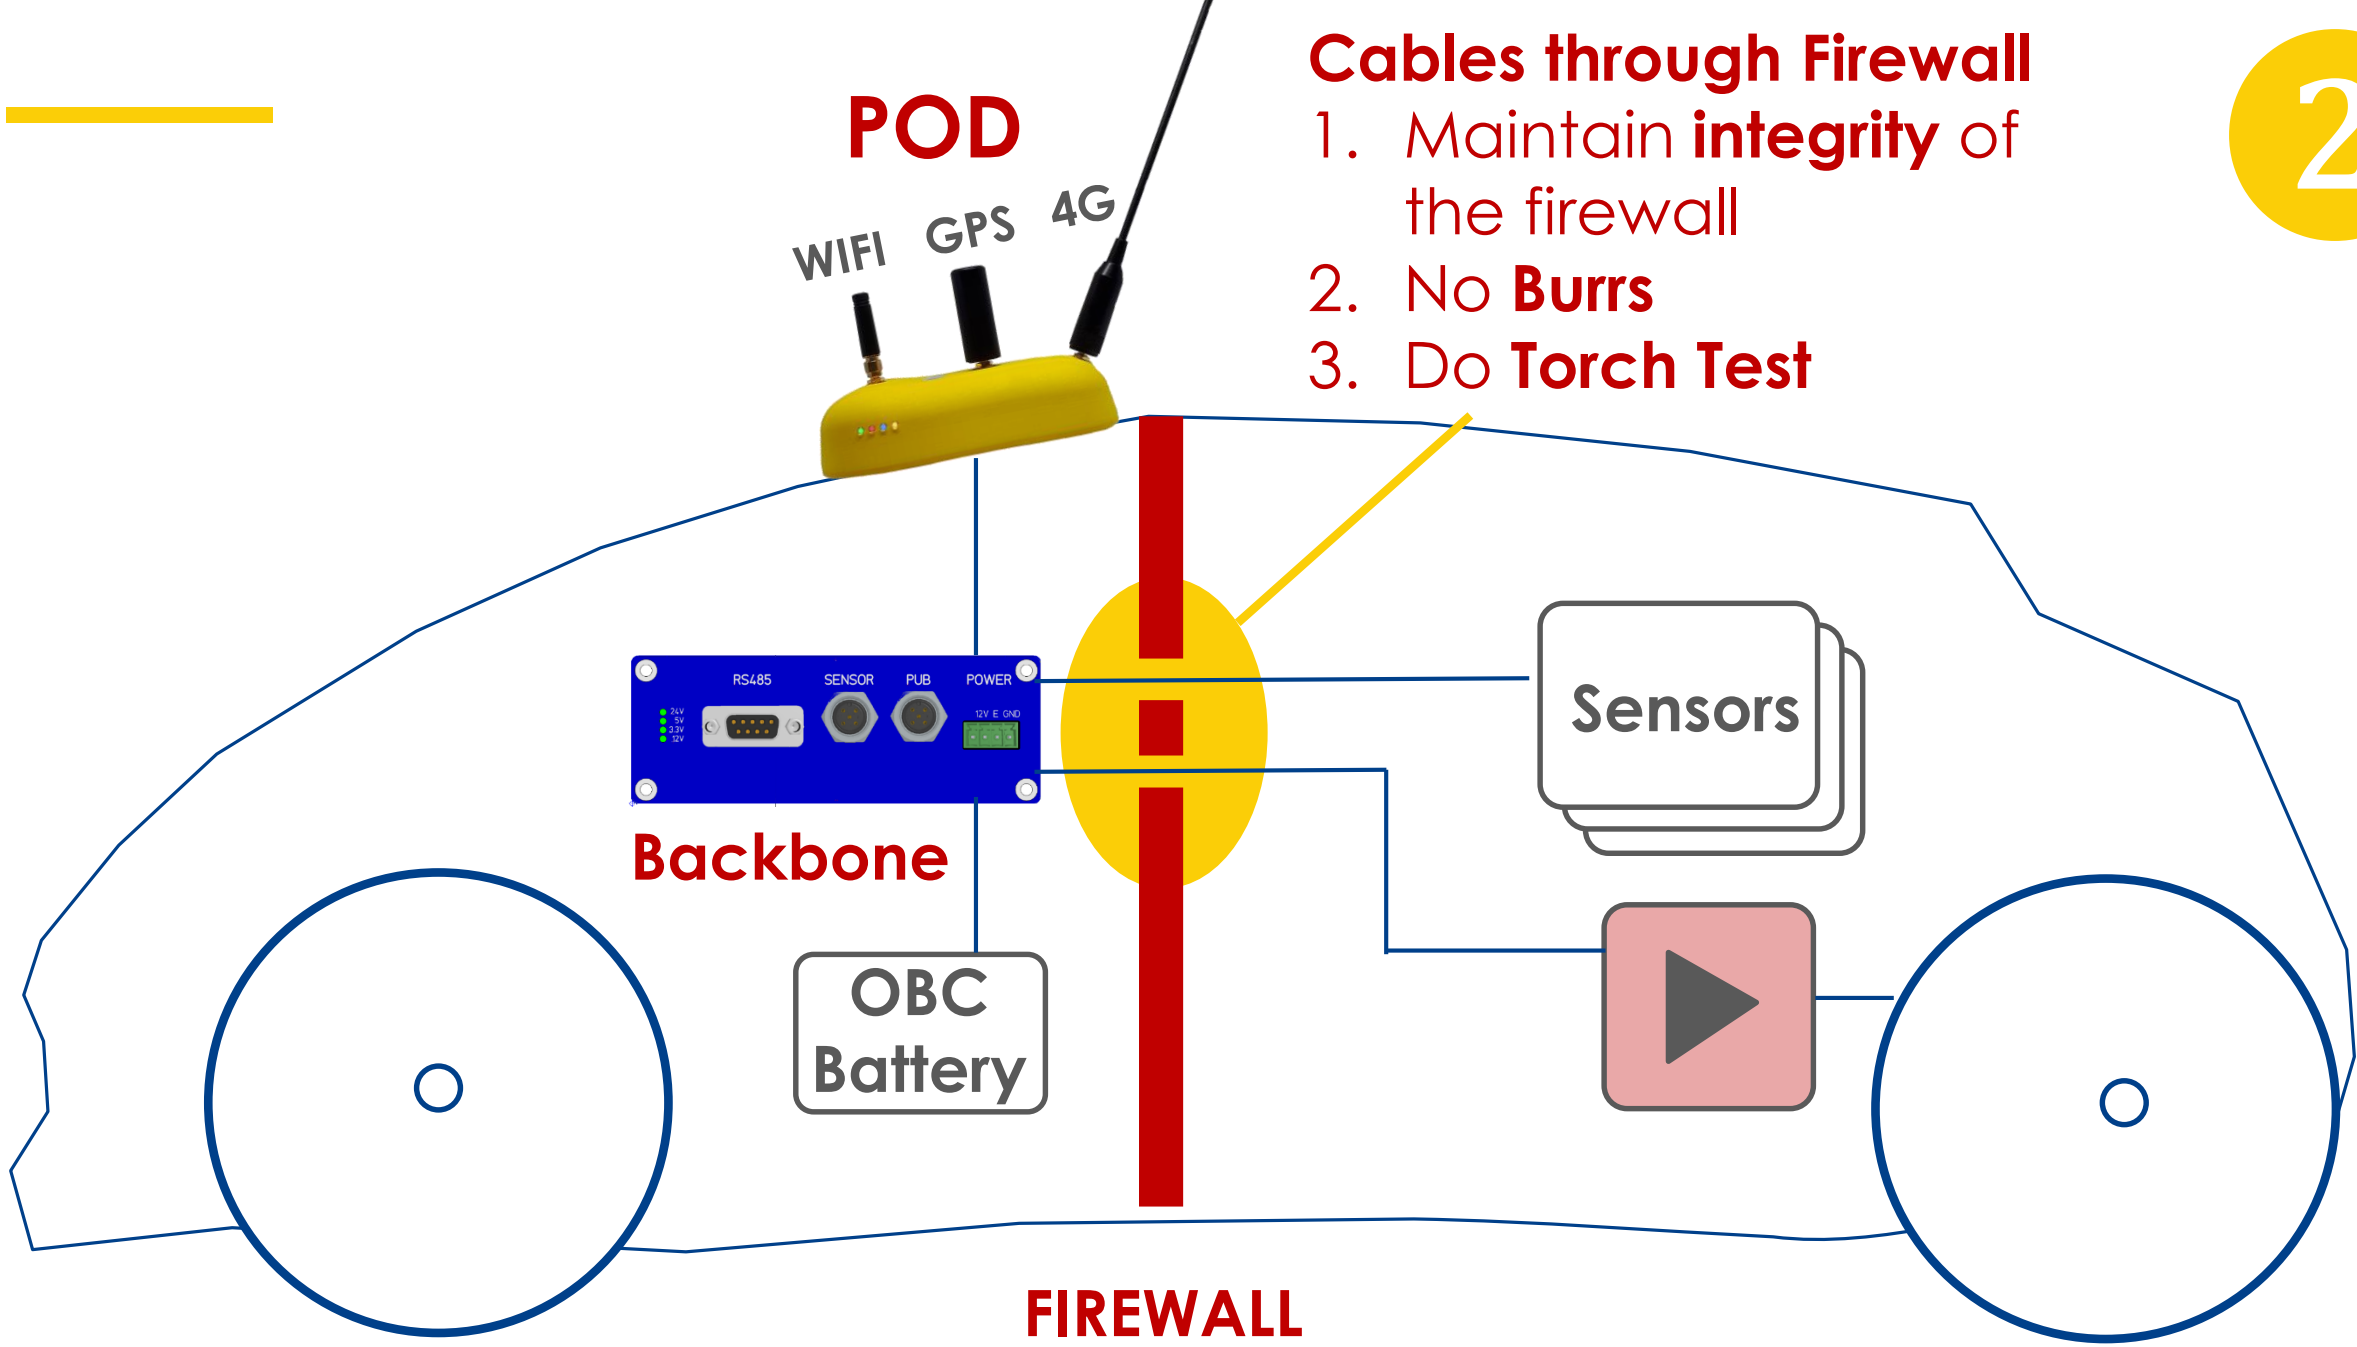

**Connection Wires far away from**

- 1. Ignition Coils / Sparky sources
- 2. Inverters/Drivers
- 3. Any Power-Electronics

# Cables through Firewall

- 1. Maintain **integrity** of the firewall
- 2. No **Burrs**
- 3. Do **Torch Test**

**POD**

WIFI GPS 4G

RS485 SENSOR PUB POWER  
24V 5V 3V 12V  
12V E GND

**Backbone**

OBC  
Battery

Sensors

**FIREWALL**

---

General Recommendation: **NO LOOPS!**

---

Alternative:  
**Packages**

Strain Relieves

Shell Eco-marathon 2019

# DO NOT COME TO TELEMETRY INSPECTION UNTIL:

1. you passed **Vehicle Design & Energy verification**
2. OBC **Pod** and **Backbone** installed correctly
3. OBC **Battery** installed and charged
4. Main **Battery** charged / Engine runs 5mins
5. Energy **Sensors** installed
6. Shutdown **Relay** connected
7. Telemetry System verified (**LED**)

**VERY IMPORTANT!**

# Quick check before inspection

Once the Pod has fully started:

- **Amber LED** must be ON and **NOT flashing**
- Turn **off** OBC

**5 Seconds**

## Hint

if any of those LEDs are **FLASHING**  
Please contact us

---

# IMPORTANT when entering START/FINISH:

1. **Battery** must be charged > **60%**
2. **Turn on** the **POD** in the **Start-Finish-Tent**
3. Check **LED**: yellow LED steady (not flashing) ?
4. After attempts:  
**Turn off** the **POD** in **paddock**

**THANK  
YOU!**

# 5 Common Issues

# 3.0

# 1.Pod mounting

**Interference  
with your  
built-in  
Radio**

90° Field of View  
on all 4 sides

**Check High-Density  
Connector for Damage**

max. +/- 20°  
off Horizon

## 2.Backbone installation

Allow for

**4 inches** of cable

lift available

(A “Fist” in between)

### 3. Battery Charging & Mounting

**No access to track**  
if red LED is flashing

**> 60%**

# 4.LFM installation

Fuel injector

Electrical connection pointing up

Fuel Tank

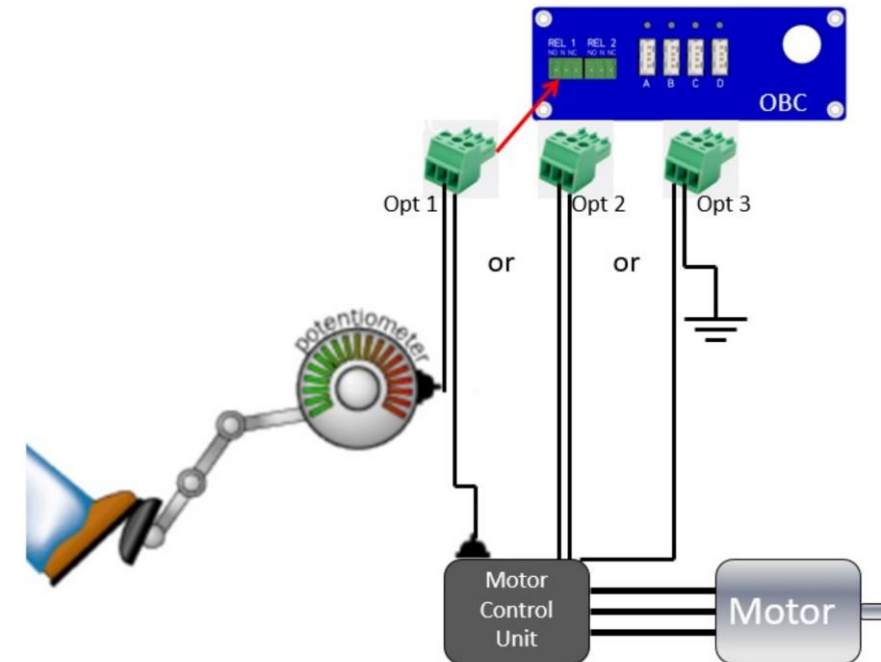

LFM mounted vertically and below injector

## 5. Shutdown relays wired

- **ICE: Do NOT connect via IGNITION COIL**
- **ECU** instead
- To be completed **before inspection**
- Wiring **specific** to your **energy class**

Password:

**DO NOT COME TO TECHNICAL INSPECTION UNTIL:**

- Hole drilled
- Joulemeter installed
- Liquid Flowmeter, Union and barbs installed on fuel line
- Battery fully charged
- Shutdown relay connected
- Printed technical documentation
- Battery installed
